AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 6, line 7 as follows:

More preferred moieties of Formula 1 (including isomers and mixtures thereof) are those where R^a , R^b , R^c and R^d are independently selected from: H, optional substituents and optionally substituted C_{1-10} hydrocarbyl, most preferably H, hydroxyl, amino and $\underline{C_{1-6}}$ hydrocarbyl $\underline{C_{1-10}}$ hydrocarbyl, for example H, OH and $\underline{C_{1-4}}$ alkyl.

Please amend the paragraph beginning on page 6, line 25 as follows:

In the <u>formulae</u> used herein arrows denote a point of attachment (such as a covalent bond) thereto.

Please amend the paragraph beginning on page 6, line 28 as follows:

The term "independently" as used herein when referring to a list of generic variables (such as n, m and/or p) and/or labelled generic moiet(ies) (such as R¹ to R^x) represented in any formula(e) herein denote that those labels may each represent any number(s) and/or moiet(ies) selected from those listed and thus each may be the same as and/or different from each other as appropriate. The term "independently" as also used herein denotes where appropriate that a generic variable and/or moiety represented by single label (such as "n" or R¹) which can occur a plurality of times in the same formula may in each instance therein represent the same and/or different values and/or moeit(ies) moiet(ies) selected from those listed, for example where one or more generic substituent(s) are shown by a single label as repeatedly attached to one or more other moiet(ies) in a formula herein, these may be the same as and/or different from each other in each occurrence.

Please amend the paragraph beginning on page 11, line 4 as follows:

A another Another further aspect of the invention provides use of a-an ink of the invention (preferably a lithographic ink) to print an article and/or an article so printed.
